3. Edit details and add

4. Done

App shows how your entry appears in the list and then scroll you up to the top

FLOW #1 UPDATES

BASED ON

HEURISTIC EVALUATION

BY JAIME ZAMORANO

Original: https://docs.google.com/document/d/1vODPtADkmXuS_xf0_QQnDuE89tFjkeVCvvB6PNExr8/edit#heading=h.pgiqsnie7px6

Violation: On the menu bar are mixed lists or sections with a direct action button - create (+)

Heuristic: Consistency and standards, severity 2.

My comment: Disagree. Direct action is «Add». Also it's common practice: Instagram (add), couchsurfing (search), swarm (checkin).

Feedback based idea: I was wondering how to separate events other people can see (social part) and reports to data base for administration/business. Then I checked twitter

The image shows a mobile application interface with a header containing a plus sign (+), the text '@Home', a search icon, and three dots. A red arrow points from the text 'Add event / help (others can see on this page)' to the '+' button. Another red arrow points from the text 'Report problem / lack (only administration can see)' to the bottom navigation bar. A red arrow also points from the text 'Two icons in one corner aren't pretty comfortable, but twitter did so...' to the top right corner of the screen, which contains a magnifying glass icon and three dots.

Two icons in one corner aren't pretty comfortable, but twitter did so...

+ @Home ⚡ ...

Home Comment Report Problem

Violation: When creating an action is difficult to figure out which other sets of actions there are unless you swipe to all of them.

Heuristic: User control and freedom, severity 2

My comment: Yes. But It's a phone. You swipe, or scroll, or check dropdowns.

Feedback based idea: as soon as I separated events and reports, I can use one list for all types.

Option 1

Violation: Some menu icons are hard to read, it'd perhaps need to be helped by text or more understandable icon

Heuristic: Match between system & real world, severity 3.

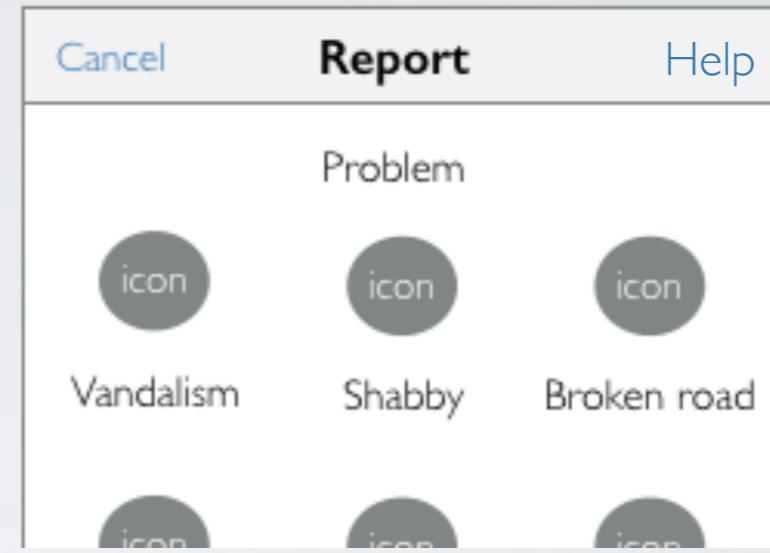

My comment: If evaluator talking about event/report types icons, yes. Agree. But I consider them a part of the graphical design, so will not fix it for now.

Feedback based idea: Events are easy to learn - there are a lot of examples in front of you. But report items really need a description (not just a good icon) during onboarding. While they'll be annoying for experienced user.

Option 1: another screen with descriptions

Option 2: show/hide description on this screen

What do you think?

leads to another screen with descriptions

VS

Option 2

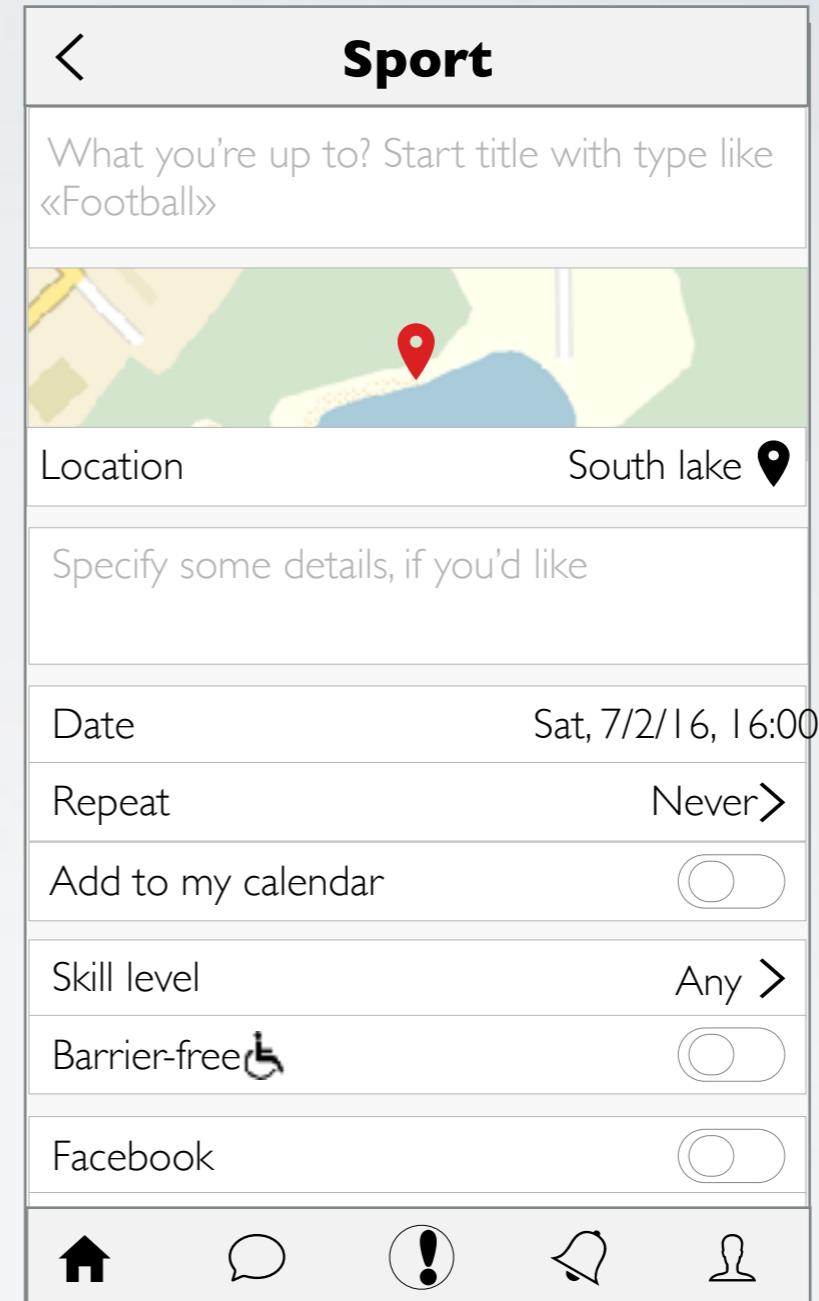

Violation: Activating switch to add description (extra action)

Heuristic: Recognition over recall, severity I

My comment: Agree. Let's make a usual field which expands while typing

*Also considering the idea to allow photos in any type of events

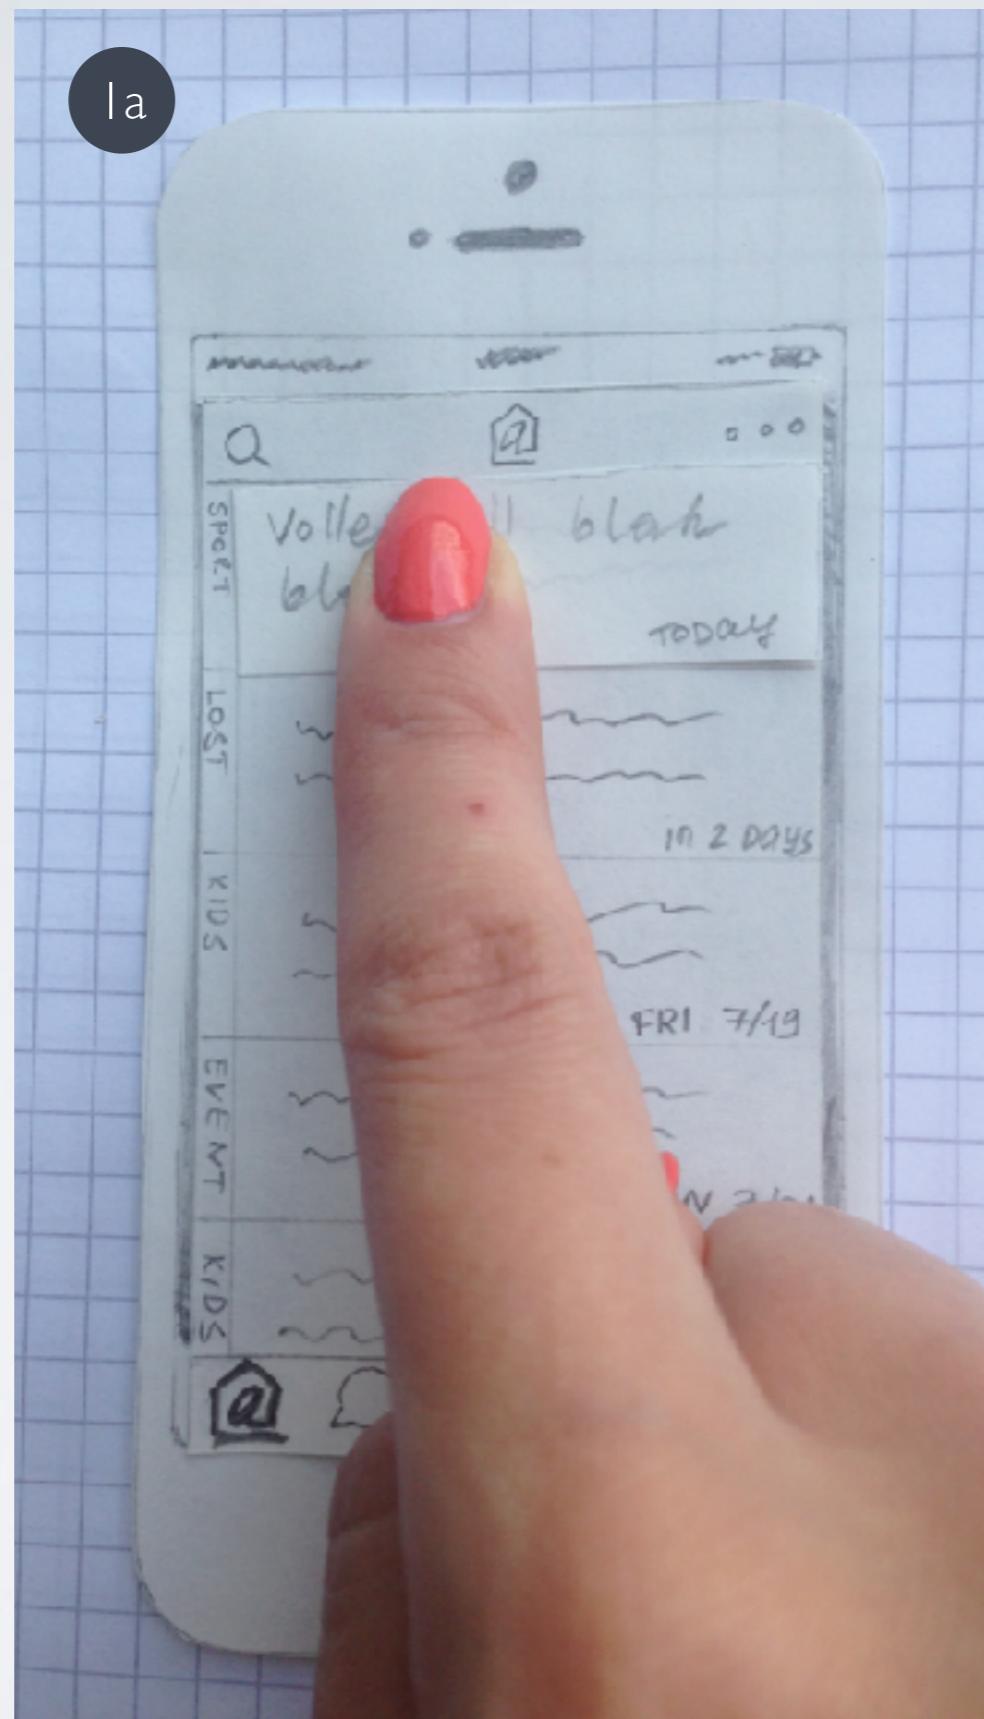

FLOW #2

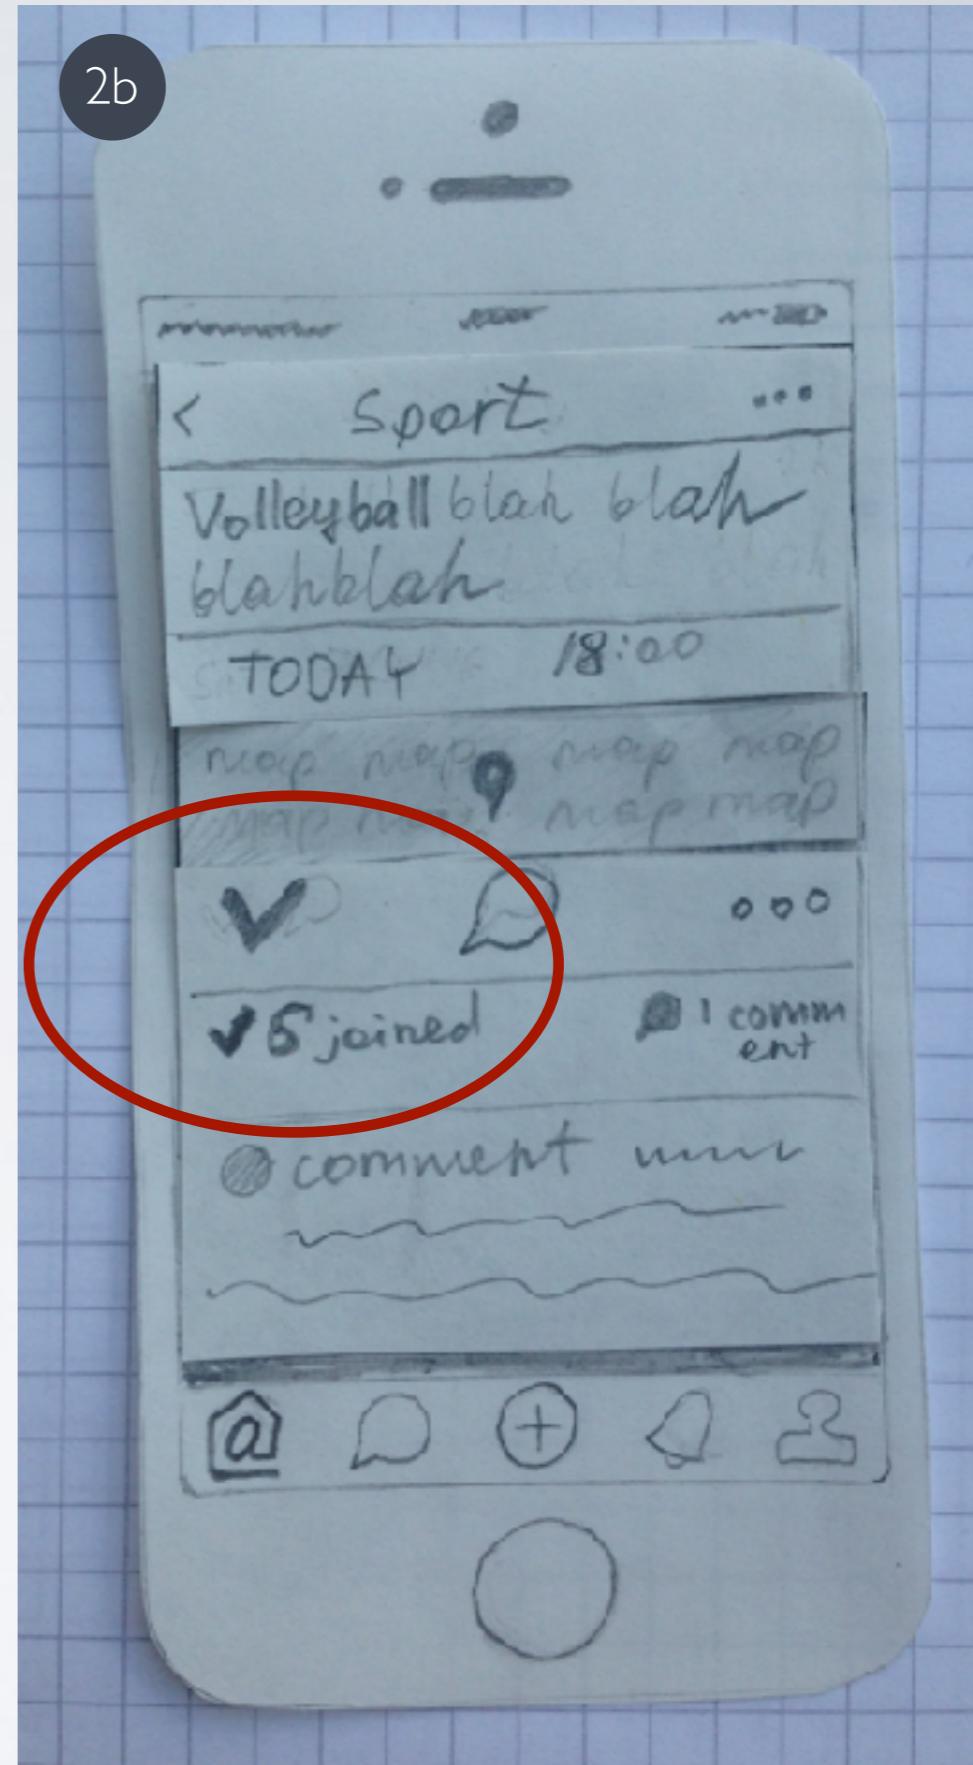

JOIN VOLLEYBALL GAME

(if someone else added it, not me)

I.Tap entry
and browse
details

2.Tap «join»
and see
feedback

FLOW #2 UPDATES

BASED ON

HEURISTIC EVALUATION

BY JAIME ZAMORANO

Violation: Sport detail does not have the description field

Heuristic: Consistency and standard, severity 2.

My comment: ...what's mean user added nothing here

Violation: Actions and all the information are widespread the screen and need to be better hierarchized

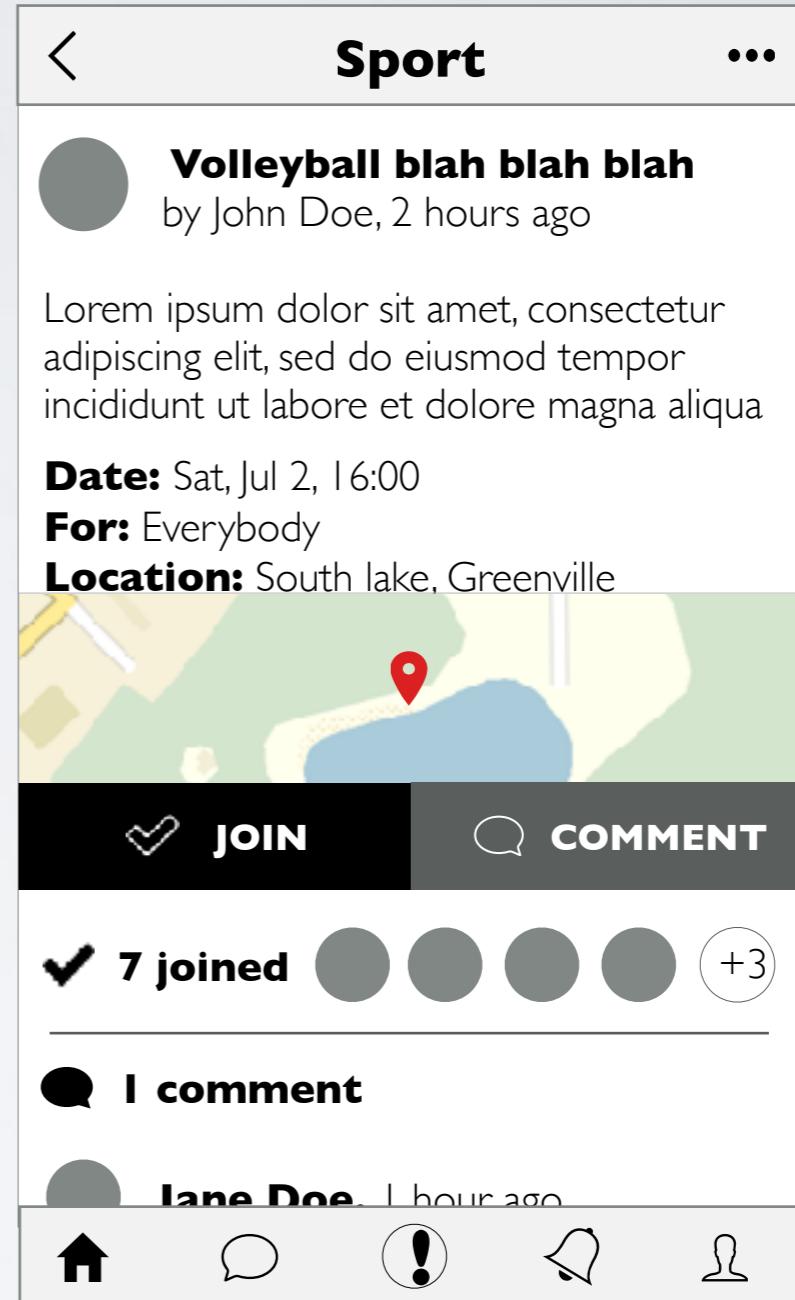

Heuristic: Consistency and standard, severity 2.

My comment: Agree. Reorganized a bit.

Violation: Check icon is a bit confusing and lacks information -> join label/icon

Heuristic: Match between system & real world, severity 1.

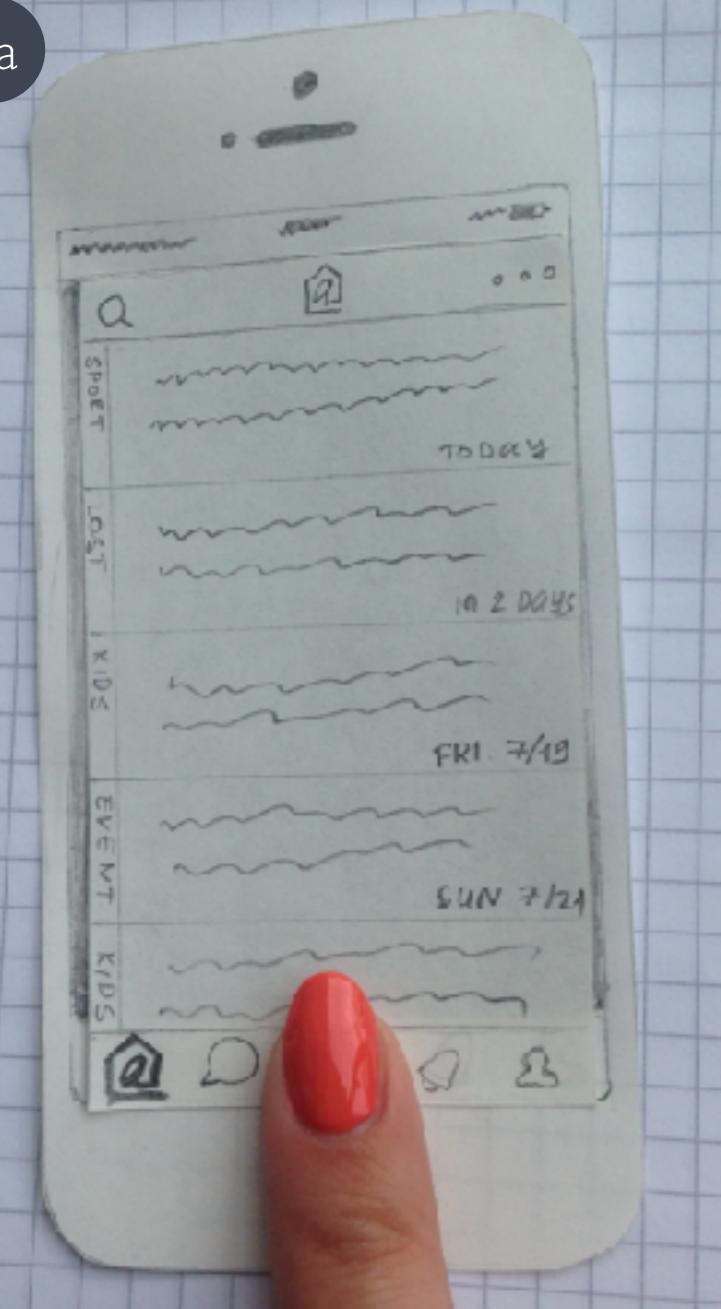

My comment: Added text. Is it really better?

FLOW #3
**TAG THAT YOU
NEED A LAUNDRY HERE**

I. Tap +

Ia

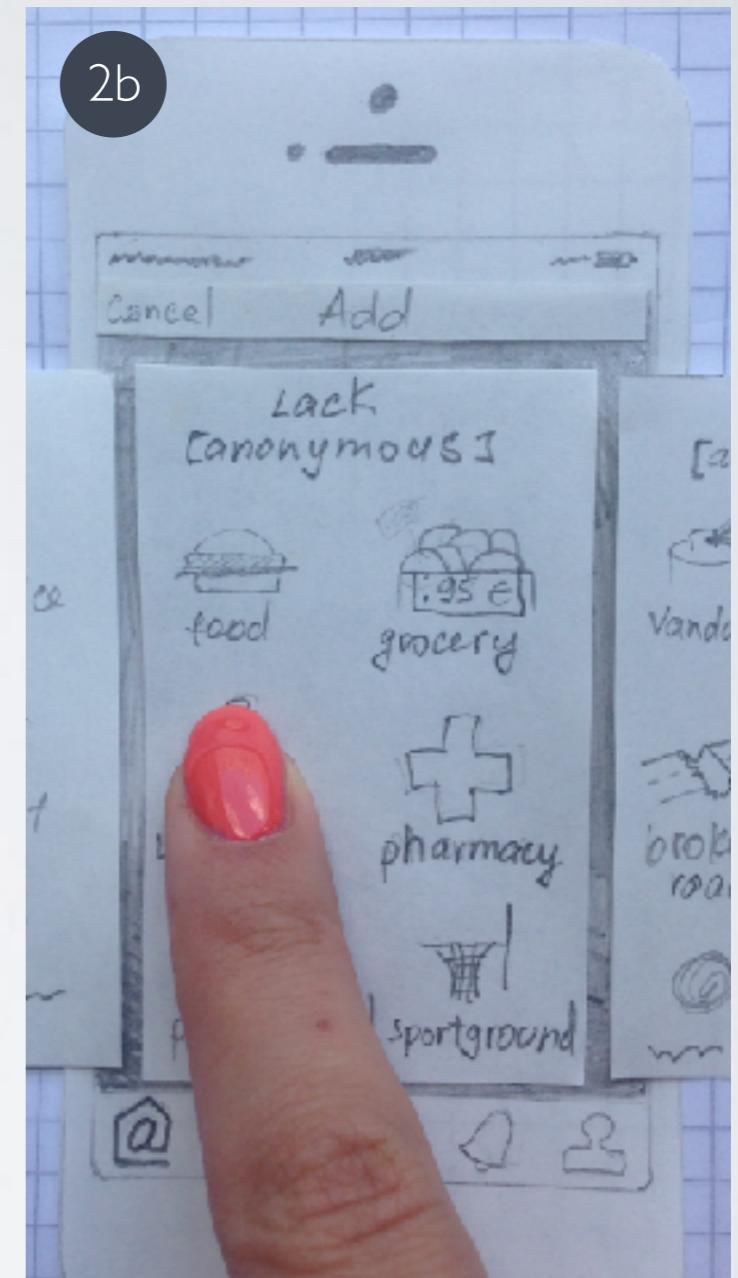

Ib

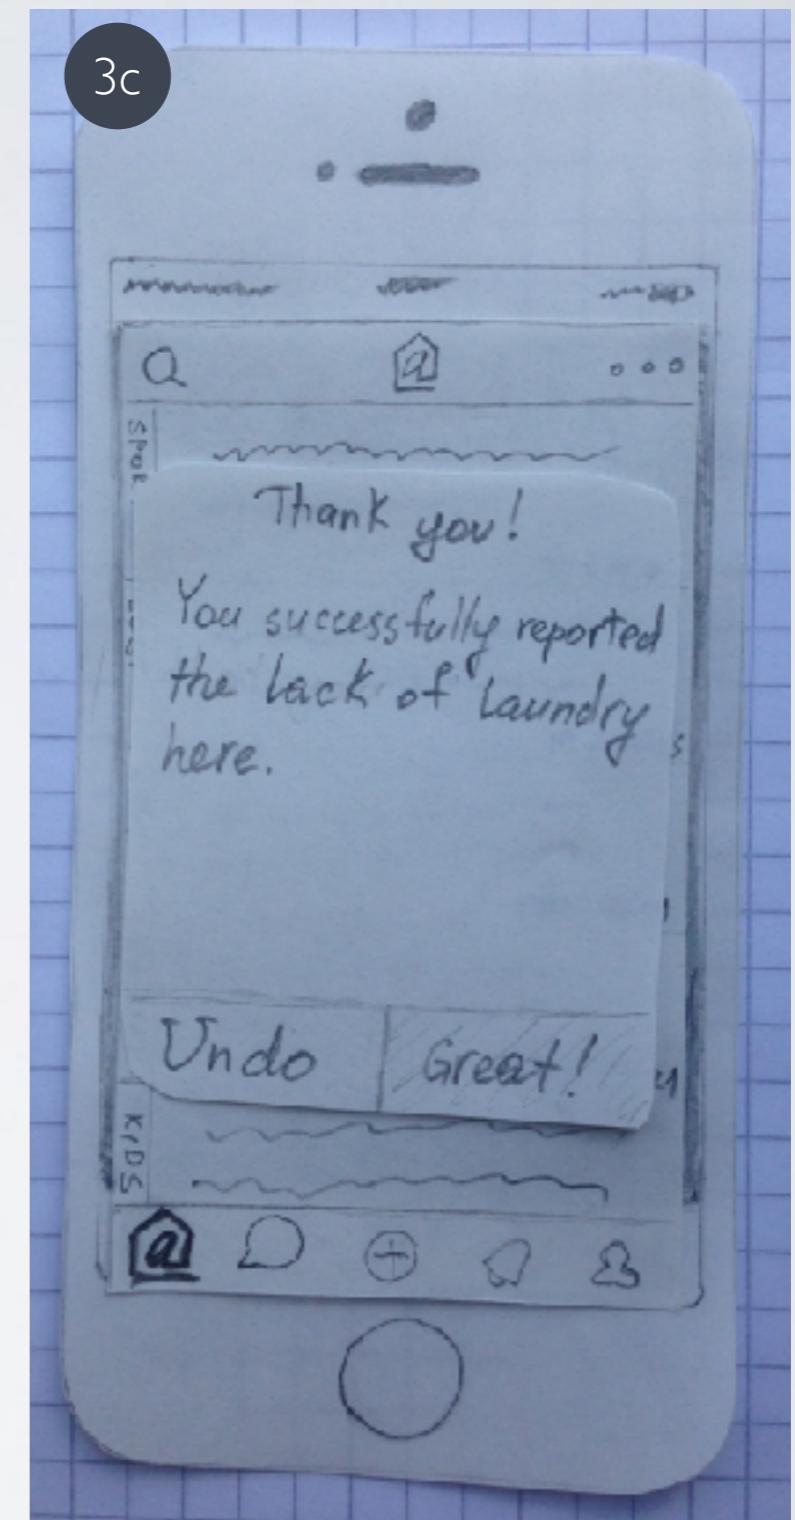

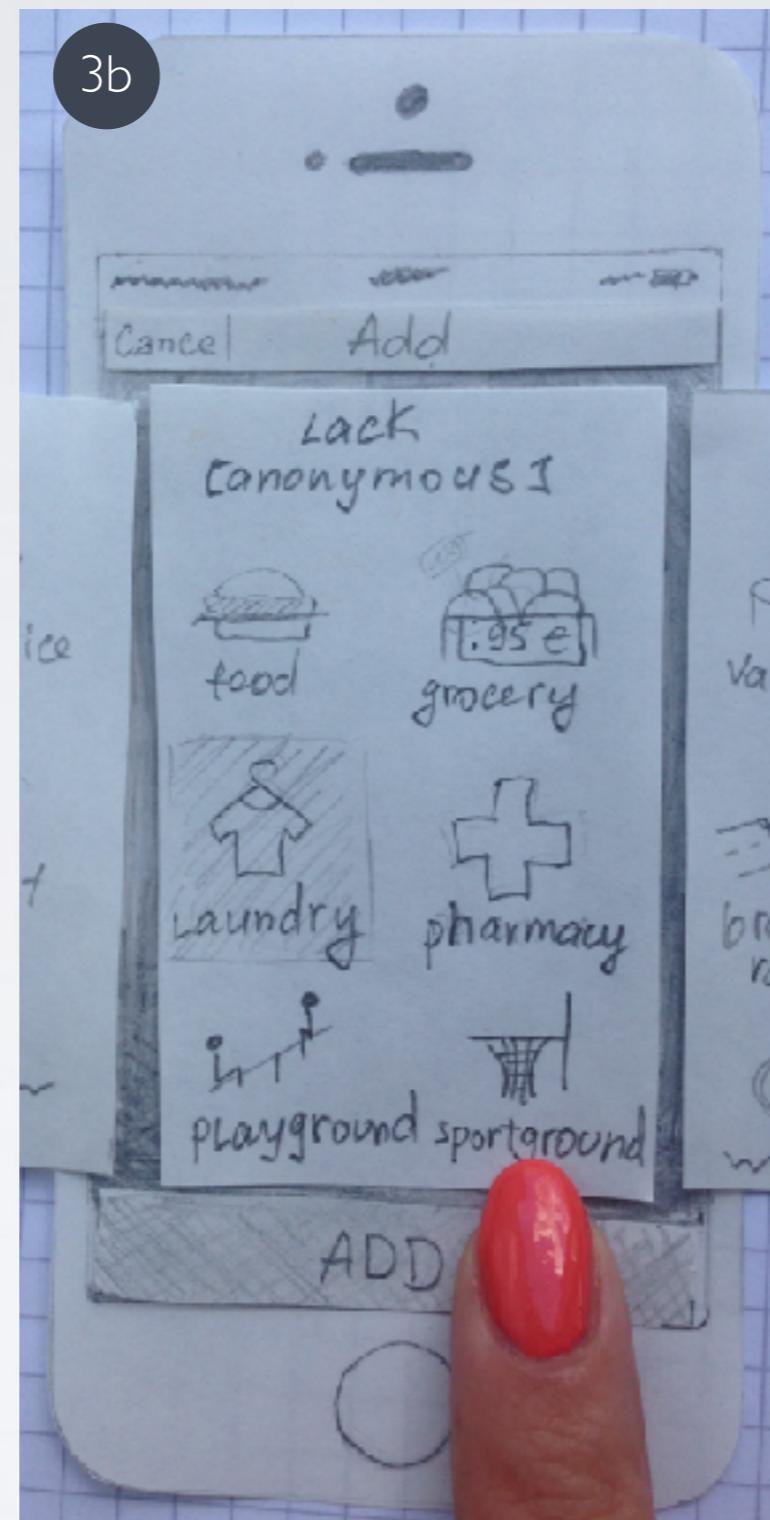

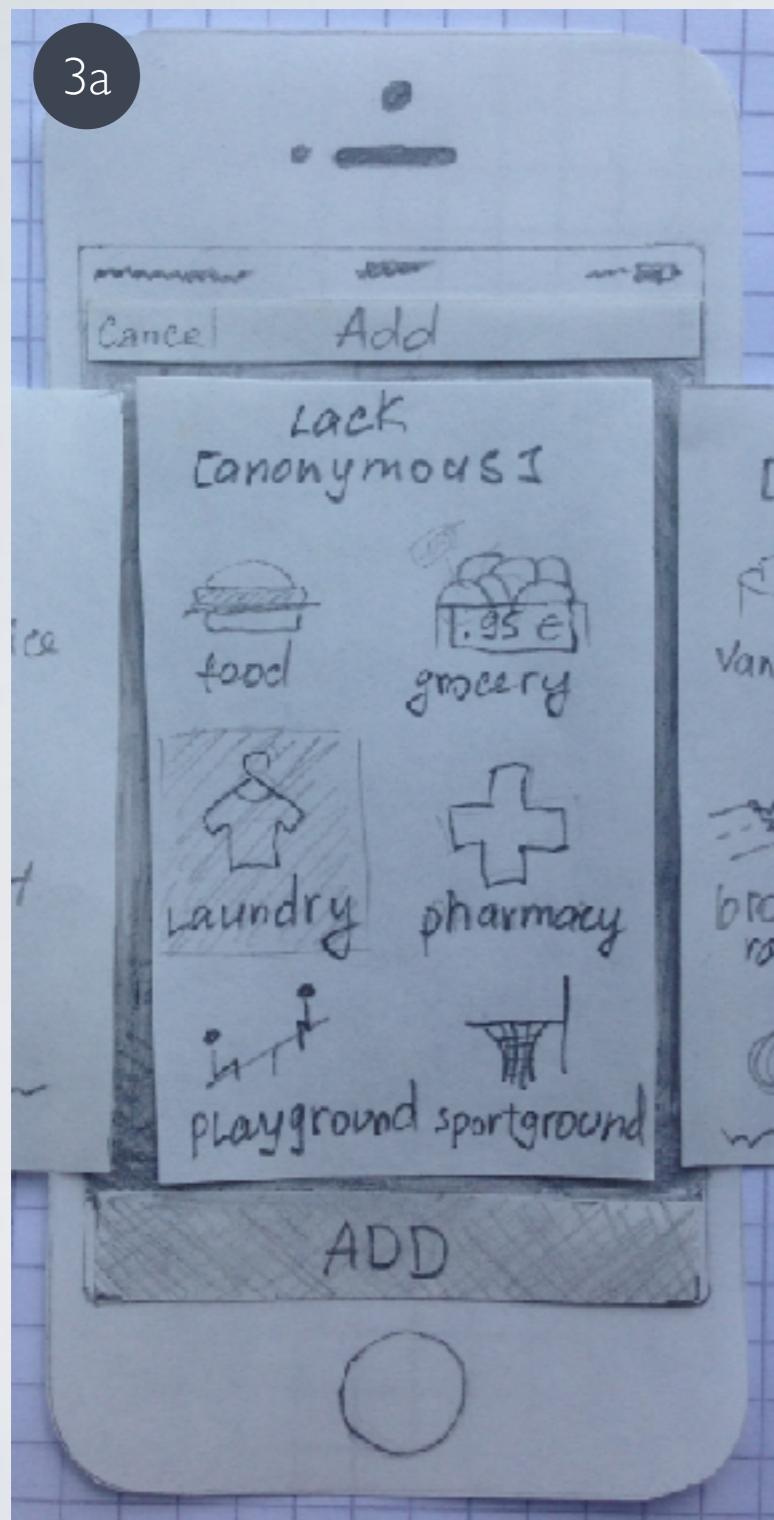

2. Choose category

←
swipe

3. Confirm

FLOW #3 UPDATES

BASED ON

HEURISTIC EVALUATION

BY JAIME ZAMORANO

Violation: There are different messages and display of information after the last step of creating a “lack” or “task” (flow 1 and 3)

Heuristic: Consistency and standard, severity 2.

My comment: Already solved by separating events and reports.

Violation: ‘Lack’ can be a confusing word in the title for “the lack of ___” in a zone

Heuristic: Match between system & real world, severity 1.

My comment: Already renamed to «I need here...»

Violation: When creating a ‘need for’ or a ‘lack of’. There could be more details added, such as the area (I guess it takes the area where the user is, but it’s not clear), a description and perhaps other information such as the closest laundries available, etc.

Heuristic: Visibility system status & User control & freedom, severity 3.

My comment: Agree. So next screen between «I need...» and «thank you» may look like this

I need a laundry here

< Need a laundry

Laundries nearby:

 Laundry name 1 2 mi
Address

 Laundry name 2 2.6 mi
Address

 Laundry name 3 3 mi
Address

SHOW MORE

REPORT ANYWAY

Tag will be placed right where you stand
